Is my data secure?

FAQ · https://behca.com/support/is-my-data-secure/

Data security and privacy is our #1 priority. Our data infrastructure is hosted on the AWS (Amazon Web Services) cloud infrastructure with bank-level security. All data is encrypted in transit and at rest.

We use physical, procedural, and technical safeguards to preserve the integrity and security of your information. We regularly back up your data to prevent data loss and aid in recovery. Additionally, we host data in secure SSAE 16 / SOC1 certified data centers, implement firewalls and access restrictions on our servers to better protect your information, and work with third party security researchers to ensure our practices are secure.
